

ROYAL SOCIETY THE

OR

Founded 1876

LIBRARY REGULATIONS

(a) Books, periodicals and pamphlets may be borrowed by Fellows, Members, Licentiate Members, Associates and Affiliates personally or by a messenger producing a written order. The person to whom such publications are delivered shall sign a

receipt for them in a book provided for that purpose.

(b) Publications may be borrowed through the post upon a written order. An acknowledgement of the receipt of such publications must be made on the form provided and returned to the Society immediately. Failing this, it will be assumed that the borrower has received the books, for which he will accordingly be held responsible. The postage of publications returned to the Society shall be defrayed by the borrower.

(c) A borrower may not have more than three publications in his procession at a second control of the second c

in his possession at one time.

(d) A borrower will be considered liable for the value of any publication lost or damaged while on loan to him, and, if it be a single volume or part of a set, for the value of the whole work thereby rendered imperfect. Marking or writing in the publications is not permitted, and borrowers are requested to

call attention to damage of this character.

(e) Books and pamphlets may be retained for twenty-eight days. Periodicals may be retained for fourteen days. Applications for extension of the loan period must be made in writing before its expiry. This loan period cannot be extended without application being made to the Secretary of the Society whose decision in this matter must be accepted as final and binding.

(f) Books and pamphlets added to the Library will not be

lent until after the expiry of one month from the date received. The current number of a periodical may not be borrowed.

(g) Borrowers retaining publications longer than the time specified, and neglecting to return them when demanded, forfeit the right to borrow until they be returned, and for such further time as may be ordered by the Council.

Any borrower failing to comply with a request for the return of a publication shall be considered liable for the cost of replacing it, and the Council, may, after giving due notice to him, order it to be replaced at his expense.

No publication may be reissued to the same borrower until at least seven days have elapsed after its return, neither may it be transferred by one borrower to another.

(h) Publications may not be taken or sent out of the United Kingdom.

(i) Publications returned through the post must be securely

packed and adequately protected.

(j) Parcels should be addressed: THE LIBRARIAN, THE ROYAL SOCIETY OF HEALTH

EXPLANATORY STATEMENT

The figures relating to Births and Deaths are tabulated from Returns furnished by the Local Registrars, and those relating to Marriages from Returns received from the Clergy, Authorised Persons, Registrars of Marriages, &c. In all Tables except IV, live births and deaths are classified according to area of residence, the registered numbers having been provisionally adjusted, by means of such information as is available. Any further and final adjustments will be incorporated in the figures to be published in the Annual Review.

The figures relating to Notifications of Infectious Diseases are summarised from those published in the Weekly Returns, adjusted in respect of any returns or corrections received too late for insertion in that series.

Table I shows, for England and Wales, the Marriages, Births and Deaths registered in the past quarter and in each of the years and quarters of the past ten years.

Table II shows the Annual Rates corresponding to the above.

Table III shows the Birth and Death Rates and Analysis of Mortality during the last 5 quarters, in (a) England and Wales, (b) 126 County Boroughs and Great Towns and (c) Smaller Towns with estimated resident populations 25,000-50,000 at census 1931.

Table IV shows the Births and Deaths (distinguishing deaths of Infants under one year) and Table IVa the Marriages of the quarter by Counties.

Table V shows, for each of the 126 County Boroughs and Great Towns and the Metropolitan Boroughs, the Births and Deaths of the Quarter (distinguishing certain causes and deaths of Infants under one year) and the corresponding annual rates.

Table VI shows, for each of the 148 Smaller Towns, the Births and Deaths of the quarter (distinguishing certain causes and deaths of Infants under one year).

Table VII shows the Births and Deaths (distinguishing certain causes) and Birth and Death rates in London and in certain cities in the British Empire and in foreign countries, in the last available quarter.

Table VIII is a summary of returns of Notified cases of Infectious Diseases. These figures are included in the present publication by arrangement with the Ministry of Health, in pursuance of Section 5 of the Census Act, 1920.

Note:—The returns for the quarters ending 30th June and 31st December contain lists of the changes of boundaries of administrative areas during the six months ending on these dates while summaries of certain figures for the year are published in the December and March quarter issues (see Tables IX-XII).

NOTES ON THE FIRST QUARTER OF 1939

ENGLAND AND WALES.

Births.

153,547 live Births were registered in the First Quarter of 1939; this is 1,640 less than the number recorded in the corresponding Quarter of 1938 and corresponds to an annual rate of 15·1 per 1,000 of the estimated mid-year population for the year 1938. Of the total, 7,354 were illegitimate, or 837 more than the number shown in the Return for the First Quarter of 1938.

Of the 153,547 live births 78,694 were males and 74,853 females, giving a proportion of 1,051 males to 1,000 females; the average proportion in the 10 preceding First Quarters was 1,052.

6,324 stillbirths were registered during the quarter—139 more than the number recorded in the First Quarter of 1938—corresponding to an annual rate of 0.62 per 1,000 of the population or 4.0 per cent. of the total births registered.

Deaths.

The Deaths (excluding stillbirths) registered numbered 154,158 and were 34,957 more than in the preceding Quarter, and 16,261 more than in the corresponding Quarter of 1938. They comprised 77,611 males and 76,547 females, a proportion of 1,014 males to 1,000 females. The total deaths correspond to an annual rate of 15.2 per 1,000 of the population or 1.6 above that recorded during the First Quarter of 1938.

The Mortality of Infants under one year of age was equal to 65 per 1,000 registered live births. This rate was 17 per 1,000 below the average of the 10 preceding First Quarters.

Urban Mortality.

The highest death-rates from certain epidemic diseases in the 126 Great Towns (Table V) during the quarter were as follows:—

From measles 0·20 in West Bromwich, 0·17 in Middlesbrough, 0·16 in Cardiff, 0·13 in Merthyr Tydfil and 0·12 in Stockton-on-Tees; from whooping cough 0·35 in Grimsby, 0·23 in Middlesbrough, 0·22 in Gloucester, 0·21 in Warrington, 0·19 in Chesterfield and 0·18 in Exeter; from diphtheria 0·66 in South Shields, 0·45 in Doncaster and 0·32 in Darlington, Middlesbrough and Stanley (Durham); from influenza 1·56 in Rhondda, 1·28 in Ipswich, 1·21 in Luton and 1·19 in Southport.

The highest death-rates per 1,000 live Births from diarrhæa and enteritis among children under two years of age were 22·2 in Sunderland, 19·2 in Birmingham, 17·1 in Bradford, 14·3 in Kingston-upon-Hull and 13·3 in Southampton.

17767

Small-pox.

There were no deaths from small-pox registered during the quarter, but there was one case notified from Liverpool Port Health District.

Natural Increase or Decrease.

The natural *decrease* of population by excess of deaths over births was 611 as against natural *decreases* of 5,556 and 18,311 in the corresponding quarters of 1936 and 1937 and a natural *increase* of 17,290 in the corresponding quarter of 1938.

Marriages.

The number of *persons* married in the First Quarter of 1939 in England and Wales was 93,098 a decrease of 10,714 on the number in the corresponding quarter of 1938. The number corresponds to an annual rate of $9\cdot 2$ per 1,000 of the estimated mid-year population for the year 1938.

UNITED KINGDOM AND ÉIRE.— First Quarter, 1939

In the United Kingdom and Eire 195,417 births and 191,821 deaths were registered in the three months ended 31st March, 1939. The increase of population owing to the excess of births over deaths was therefore, 3,596. The number of *persons* married was 118,248.

therefore, 3,596. The number of persons married was 118,248. For facts, in detail, concerning Scotland, Northern Ireland and Eire, reference should be made to the Returns published by their respective Registrars-General.

[•] Furnished by the Director of the Meteorological Office.

METEOROLOGICAL REMARKS

ENGLAND AND WALES.

FIRST QUARTER, 1939.

January.

The weather of January was remarkable for excessive rainfall and serious flooding. There was considerable snow at times. An unusually severe north-westerly gale occurred on the south-west coasts on the night of the 22nd to 23rd.

The deviation of the mean temperature from the average for the districts ranged from $-1\cdot3^{\circ}$ F. in England, N.W. and N. Wales to $+1\cdot6^{\circ}$ F. in England, S.E. The first week was notably cold in most parts, particularly the north, and it was cold again from the 25th onwards. There was a rapid rise of temperature on the 7th and many places registered the highest temperature of the month on the 7th or 8th, while the week 15th to 21st was really mild. Some notably low temperatures in the screen were reported during the first week; for example, 5° F. at Newport (Shropshire), 6° F. at Shrewsbury and 7° F. at Mayfield (Staffs) all on the 6th.

The general precipitation of England and Wales was 220 per cent. of the average for the period 1881-1915; it was the wettest January since before 1868 and as far as can be estimated since 1764. Serious flooding occurred in many parts and the observer at Copdock says that on January 26th and 27th the floods at Ipswich and neighbourhood were the worst in the 38 years he has lived there. There was considerable snow at times, chiefly between the 1st and 6th, 10th and 14th and 24th and 28th. On the 1st, snow was lying to a depth of 8 inches at Bellingham and some was still lying on the 7th; on the 10th, 7 inches of sleet and snow were reported at Meltham (Yorkshire) and on the 11th snow was lying 5 inches deep at Buxton. The snowfall of the 25th was greatest in the south and it lay for a considerable time on high land; at Cantref (Brecknock) it was 14 inches deep on the 26th and snow was still lying on the 31st and at Princetown it was 10 inches deep on the 27th and still 7 inches deep on the 31st. At Stanford Dingley, Berkshire, the level snow was 19 inches deep on the morning of the 26th.

The duration of bright sunshine was below the average at most places; the percentages of the average for the districts ranged from 69 in England, S.W. and S. Wales to 99 in England, N.E.

February.

The weather of February was mild and sunny on the whole; the general rainfall was below the average but an excess occurred in the north-west and over most of Wales.

Mean temperature appreciably exceeded the average, the excess for the districts ranging from 2.0° F. in the Channel Islands to 2.6° F. in England, N.E. The opening days were cold and some low temperatures were registered, particularly on the 3rd, when numerous

stations reported a screen minimum below 20° F. Temperature rose on the 4th and the period 5th-12th was notably mild. The extremes for the month were 61° F. at Colwyn Bay on the 10th and at Hawarden Bridge and Cannington on the 11th and 11° F. at Buxton on the 3rd.

The general precipitation of England and Wales was 85 per cent. of the average for the period 1881-1915. An excess was roughly confined to the north-west and the greater part of Wales; more than 150 per cent. of the average was registered over most of Cumberland, parts of Wales and locally in Lancashire. Less than 50 per cent. occurred locally in the western Midlands, in a large area extending from Wath-upon-Dearne in south Yorkshire to north Hertfordshire and east to the neighbourhood of the Wash, and at a few places elsewhere.

Sunshine was excessive on the whole, the percentages of the average for the districts ranging from 102 in England, N.W. and N. Wales to 157 in England, E. The excessive sunshine in east and south-east England and parts of the Midlands was noteworthy; at Kew Observatory (London) and Malvern, February, 1938, was the first February with a total sunshine of more than 100 hours since observations were first taken in 1880 and 1909 respectively. At Copdock, near Ipswich, with the exception of 1934, it was the sunniest February in a record of 38 years and at Oxford the total was only three-quarters of an hour less than the highest on record for February, namely 105.6 hours in 1899.

March.

The weather of March was dull on the whole, with a spell of cold north-easterly winds from the 25th-28th.

Mean temperature for the month very slightly exceeded the average, the deviation from the average for the districts ranging from $+0\cdot2^{\circ}$ F. in England, E. to $+1\cdot2^{\circ}$ F. in England, S.W. and S. Wales. The first six days were mild; thereafter temperature was more variable and rather cold northerly winds were experienced at times, particularly in eastern districts. A spell of cold north-easterly winds prevailed from the 25th-28th. Some low screen minima were registered on the 10th, 11th, 13th, 18th, 24th and 25th. The extremes for the month were 63° F. at Hunstanton, Attenborough and Barnstaple on the 3rd, 24° F. at Droitwich and South Farnborough on the 24th and at Tunbridge Wells on the 13th and 24th.

The general precipitation was 83 per cent. of the average for the period 1881-1915; broadly speaking rainfall exceeded the average in the east, north-east and extreme north-west and was below the average for the most part elsewhere; in the south-west there was a marked deficiency, less than half the average being received at numerous stations.

There was on the whole a considerable deficiency of bright sunshine although a slight excess was enjoyed at a few stations in the northeast and the northern Midlands. The percentages of the average for the districts ranged from 75 in the Midlands and England, S.W. and S. Wales to 90 in England, N.E.

* The Births and	D 11 .	43.1 (72.1.1							

[•] The Births and Deaths in this Table are the numbers registered, without correction for inward and outward transfers, and for London therefore differ from those in Tables V and VII.

† In addition to these numbers 53 deaths were registered which occurred in the Gresford Colliery disaster in 1934.

TABLE IVa.—MARRIAGES registered in the quarter England and Wales and ended 31st March, 1939.

Note.—Registration divisions, which form the areal unit of classification for marriage records, are in process of modification under the Local Government Act, 1929. Statistics are shown for entire Counties inclusive of their associated County Boroughs. The Registration County is co-extensive with the Administrative County (inclusive of associated County Boroughs), in all cases other than those marked *.

There was one case of Small-pox (see p. iv) and no cases of Cholera, Plague or Typhus fever notified.

* Note:—By virtue of the Public Health Act, 1936, in all areas outside London A.C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as, and included with, notifications of puerperal pyrexia. The London puerperal fever notifications, which in the foregoing table have been included with the puerperal pyrexia cases for convenience, are as follows:—

EXPLANATORY STATEMENT

The figures relating to Births and Deaths are tabulated from Returns furnished by the Local Registrars, and those relating to Marriages from Returns received from the Clergy, Authorised Persons, Registrars of Marriages, &c. In all Tables except IV, live births and deaths are classified according to area of residence, the registered numbers having been provisionally adjusted, by means of such information as is available. Any further and final adjustments will be incorporated in the figures to be published in the Annual Review.

The figures relating to Notifications of Infectious Diseases are summarised from those published in the Weekly Returns, adjusted in respect of any returns or corrections received too late for insertion in that series.

Table I shows, for England and Wales, the Marriages, Births and Deaths registered in the past quarter and in each of the years and quarters of the past ten years.

Table II shows the Annual Rates corresponding to the above.

Table III shows the Birth and Death Rates and Analysis of Mortality during the last 5 quarters, in (a) England and Wales, (b) 126 County Boroughs and Great Towns and (c) Smaller Towns with estimated resident populations 25,000-50,000 at census 1931.

Table IV shows the Births and Deaths (distinguishing deaths of Infants under one year) and Table IVa the Marriages of the quarter by Counties.

Table V shows, for each of the 126 County Boroughs and Great Towns and the Metropolitan Boroughs, the Births and Deaths of the Quarter (distinguishing certain causes and deaths of Infants under one year) and the corresponding annual rates.

Table VI shows, for each of the 148 Smaller Towns, the Births and Deaths of the quarter (distinguishing certain causes and deaths of Infants under one year).

Table VII shows the Births and Deaths (distinguishing certain causes) and Birth and Death rates in London and in certain cities in the British Empire and in foreign countries, in the last available quarter.

Table VIII is a summary of returns of Notified cases of Infectious Diseases. These figures are included in the present publication by arrangement with the Ministry of Health, in pursuance of Section 5 of the Census Act, 1920.

Note:—The returns for the quarters ending 30th June and 31st December contain lists of the changes of boundaries of administrative areas during the six months ending on these dates (see Table IX) while summaries of certain figures for the year are published in the December and March quarter issues.

NOTES ON THE SECOND QUARTER OF 1939

ENGLAND AND WALES.

Births.

164,401 live Births were registered in the Second Quarter of 1939; this is 222 more than the number recorded in the corresponding Quarter of 1938 and corresponds to an annual rate of 16.0 per 1,000 of the estimated mid-year population for the year 1938. Of the total, 6,763 were illegitimate, or 493 less than the number shown in the Return for the Second Quarter of 1938.

Of the 164,401 live births 84,168 were males and 80,233 females, giving a proportion of 1,049 males to 1,000 females; the average proportion in the 10 preceding Second Quarters was 1,050.

6,317 still-births were registered during the quarter—322 less than the number recorded in the Second Quarter of 1938—corresponding to an annual rate of 0.61 per 1,000 of the population or 3.7 per cent. of the total births registered.

Deaths.

The Deaths (excluding stillbirths) registered numbered 120,433 and were 33,725 less than in the preceding Quarter, but 1,245 more than in the corresponding Quarter of 1938. They comprised 61,821 males and 58,612 females, a proportion of 1,055 males to 1,000 females. The total deaths correspond to an annual rate of 11.7 per 1,000 of the population or 0.1 above that recorded during the Second Quarter of 1938.

The Mortality of Infants under one year of age was equal to 48 per 1,000 registered live births. This rate was 8 per 1,000 below the average of the 10 preceding Second Quarters.

Urban Mortality.

The highest death-rates from certain epidemic diseases in the 126 Great Towns (Table V) during the quarter were as follows:—

From measles 0·39 in West Bromwich, 0·12 in Stockton-on-Tees and in Stoke-on-Trent, 0·11 in Middlesbrough and 0·09 in Burnley; from whooping cough 0·40 in West Hartlepool, 0·21 in Twickenham, 0·17 in Middlesbrough and 0·16 in York; from diphtheria 0·29 in South Shields, 0·18 in Chester and 0·17 in Middlesbrough, Grimsby and Exeter; from influenza 0·71 in Merthyr Tydfil, 0·60 in Walsall, 0·55 in Swansea, 0·46 in Twickenham and 0·45 in Lincoln.

The highest death-rates per 1,000 live Births from diarrhæa and enteritis among children under two years of age were 19.0 in Southampton, 17.2 in Sunderland, 13.9 in Birmingham and 12.3 in Kingston-upon-Hull, Leeds and St. Helens.

Small-pox.

There were no cases of small-pox notified and no deaths registered during the quarter.

Natural Increase or Decrease.

The natural *increase* of population by excess of births over deaths was 43,968 as against natural *increases* of 38,112, 45,252 and 44,991 in the corresponding quarters of 1936, 1937 and 1938.

Marriages.

The number of *persons* married in the Second Quarter of 1939 in England and Wales was 204,688 an increase of 1,118 on the number in the corresponding quarter of 1938. The number corresponds to an annual rate of 19.9 per 1,000 of the estimated mid-year population for the year 1938.

UNITED KINGDOM AND ÉIRE.— Second Quarter, 1939

In the United Kingdom and Eire 209,343 births and 150,858 deaths were registered in the three months ended 30th June, 1939. The increase of population owing to the excess of births over deaths was therefore, 58,485. The number of *persons* married was 236,206.

For facts, in detail, concerning Scotland, Northern Ireland and Eire, reference should be made to the Returns published by their respective Registrars-General.

METEOROLOGICAL REMARKS

ENGLAND AND WALES.

SECOND QUARTER, 1939.

April.

The weather of April was sunny generally and warm at times between the 9th and 21st; it was wet in the southern half of the country.

Mean temperature exceeded the average, the deviation for the districts ranging from + 1·4° F. in England, S.W. to + 1·9° F. in England, N.E., England, E. and the Midlands. It was very warm at times between the 9th and 21st, particularly around the 11th and 12th; at a large number of stations temperature reached or exceeded 75° F. on the 12th. The last six days were cool and some low temperatures were recorded also between the 6th and 8th. The extremes for the month were 78° F. at Cromer and Herne Bay on the 12th and 22° F. at Thetford on the 8th.

The general precipitation amounted to 125 per cent. of the average for the period 1881-1915. Broadly speaking a deficiency occurred over large areas in the north and part of the northern Midlands, while more than twice the average occurred over some areas in the east and south. Among the heavier falls in 24 hours were 2·22 in. at Saundersfoot (Pembrokeshire) on the 5th and 1·69 ins. at Uppingham and 1·50 in. at Upton, both in Berkshire, on the 3oth.

Sunshine appreciably exceeded the average, the mean of the percentages of the districts, including the Channel Islands, being 117; the periods 9th-12th and 17th-22nd were unusually sunny.

May.

The weather of May was markedly dry and the last nine days were warm on the whole and unusually sunny.

Mean temperature was not very different from the average over the country as a whole, the deviation from the average ranging from - 1·3° F. in England, E. to + 0·9° F. in England, N.W. The opening days were cool and it was cool again for the most part from the 12th-20th. Warm spells occurred from the 7th-11th and 22nd-31st. The last few days were particularly warm in the west and north but cool northerly or north-easterly winds brought rather low temperatures to exposed places in the east and south-east. The extremes for the month were 79° F. at Poole on the 27th and 24° F. at Thetford on the 4th.

The general precipitation of England and Wales was 56 per cent. of the average for the period 1881-1915. The deficiency was almost general, an excess being practically confined to parts of east and southeast England. Locally in Cumberland the deficiency was exceptional; at Braystones House, Cumberland, the total was the lowest for May in 76 years. The latter part of the month was particularly dry; at a large number of places in the east, south-east and the Midlands there was

no measurable rain after the 17th. Among the heavier falls in 24 hours were 1.38 in. at Faringdon (Berkshire) on the 1st, 1.79 in. at Goudhurst (Kent) on the 15th and 1.70 in. at Castleton, 1.71 in. at Kildale Hall (Yorkshire) and 1.40 in. at Bridlington on the 16th.

Broadly speaking sunshine exceeded the average, the general percentage for England and Wales including the Channel Islands being approximately 107. The week ending the 20th was dull, while the last ten days were sunny, the total duration for the last four days being especially large.

June.

Warm and unusually sunny weather prevailed during the first nine or ten days; subsequently the weather was changeable and cool on the whole.

Mean temperature was slightly in excess of the average in most areas, the deviations for the districts ranging from -0.2° F. in England, E. to $+1.3^{\circ}$ F. in England, S.W. and the Channel Islands. The excess was due to the unusual warmth experienced during the first week, particularly from the 4th to 7th, when temperatures of 80° F. or above were registered at numerous stations. The daily range of temperature was large during this period, a range of between 40° F. and 50° F. being recorded at many places. At Houghall, County Durham, a range exceeding 40° F. occurred on each of the four consecutive days from the 3rd to 6th. The last three weeks were mainly cool. The extremes for the month were 90° F. at London (Camden Square) on the 7th and 29° F. at Castleton on the 3rd, Doncaster on the 4th and Thetford on the 9th.

The general rainfall was 106 per cent. of the average. The distribution was variable; less than the average occurred over a large area covering most of the Midlands, south-east England, Essex and Suffolk, while more than the average occurred at most places elsewhere and more than 150 per cent. was recorded locally in Cumberland, Yorkshire, Devon and Somerset. Among the heavier falls in 24 hours were 2·35 in. at Princetown, 1·96 in. at Cantref (Brecknock), 1·88 in. at Ystalyfera (Glamorgan) and 1·85 in. at Maesteg (Glamorgan) on the 15th and 1·83 in. at Bridlington on the 19th.

Sunshine generally exceeded the average, particularly in the northwest. The first nine or ten days were exceptionally sunny; for example, the mean daily duration for the first ten days was approximately 14 hours locally in south-east and east England, while the mean daily value for the first nine days was 15 hours locally in north-west England.

* The Births and	Dootho in	thin Table	ore the ou	1				-3	

[•] The Births and Deaths in this Table are the numbers registered, without correction for inward and outward transfers, and for London therefore differ from those in Tables V and VII.

† In addition to these numbers 45 deaths were registered which occurred in the Gresford Colliery disaster in 1934.

TABLE IVa.—MARRIAGES registered in the quarter England and Wales and ended 30th June, 1939.

Note.—Registration divisions, which form the areal unit of classification for marriage records, are in process of modification under the Local Government Act, 1929. Statistics are shown for entire Counties inclusive of their associated County Boroughs. The Registration County is co-extensive with the Administrative County (inclusive of associated County Boroughs), in all cases other than those marked *.

There were no cases of Small-pox, Cholera, Plague or Typhus fever notified.

* Note:—By virtue of the Public Health Act, 1936, in all areas outside London A.C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as, and included with, notifications of puerperal pyrexia. The London puerperal fever notifications, which in the foregoing table have been included with the puerperal pyrexia cases for convenience, are as follows:—

EXPLANATORY STATEMENT

The figures relating to Births and Deaths are tabulated from Returns furnished by the Local Registrars, and those relating to Marriages from Returns received from the Clergy, Authorised Persons, Registrars of Marriages, &c. In all Tables except IV and VI, live births and deaths are classified according to area of residence up to the 2nd September, 1939. From that date they are classified by place of occurrence. In all Tables figures relating to deaths include those of non-civilian males (i.e. of serving sailors, soldiers or airmen) up to the above mentioned date, but exclude them thereafter. Any final modifications or adjustments will be incorporated in the figures to be published in the Annual Review.

Meteorological information is suspended until further notice.

The figures relating to Notifications of Infectious Diseases are summarised from those published in the Weekly Returns, adjusted in respect of any returns or corrections received too late for insertion in that series.

Table I shows, for England and Wales, the Marriages, Births and Deaths registered in the past quarter and in each of the years and quarters of the past ten years.

Table II shows the Annual Rates corresponding to the above.

Table III shows the Birth and Death Rates and Analysis of Mortality during the last 5 quarters, in (a) England and Wales, (b) 126 County Boroughs and Great Towns and (c) Smaller Towns with estimated resident populations 25,000-50,000 at census 1931.

Table IV shows the Births and Deaths (distinguishing deaths of Infants under one year) and Table IVa the Marriages of the quarter by Counties.

Table V shows, for each of the 126 County Boroughs and Great Towns and the Metropolitan Boroughs, the Births and Deaths of the Quarter (distinguishing certain causes and deaths of Infants under one year).

Table VI shows, for each of the 148 Smaller Towns, the Births and Deaths of the quarter (distinguishing certain causes and deaths of Infants under one year).

Table VII shows the Births and Deaths (distinguishing certain causes) and Birth and Death rates in London and in certain cities in the British Empire and in foreign countries, in the last available quarter.

Table VIII is a summary of returns of Notified cases of Infectious Diseases. These figures are included in the present publication by arrangement with the Ministry of Health, in pursuance of Section 5 of the Census Act, 1920.

Note:—The returns for the quarters ending 30th June and 31st December contain lists of the changes of boundaries of administrative areas during the six months ending on these dates while summaries of certain figures for the year are published in the December and March quarter issues.

NOTES ON THE THIRD QUARTER OF 1939

ENGLAND AND WALES.

Births.

161,201 live Births were registered in the Third Quarter of 1939; this is 3,119 more than the number recorded in the corresponding Quarter of 1938 and corresponds to an annual rate of 15.5 per 1,000 of the estimated mid-year population for the year 1938. Of the total, 6,458 were illegitimate, or 13 less than the number shown in the Return for the Third Quarter of 1938.

Of the 161,201 live births 82,927 were males and 78,274 females, giving a proportion of 1,059 males to 1,000 females; the average proportion in the 10 preceding Third Quarters was 1,049.

5,963 still-births were registered during the quarter—70 less than the number recorded in the Third Quarter of 1938—corresponding to an annual rate of 0.57 per 1,000 of the population or 3.6 per cent. of the total births registered.

Deaths.

The Deaths (excluding still-births) registered numbered 103,170 and were 17,263 less than in the preceding Quarter, but 568 more than in the corresponding Quarter of 1938. They comprised 52,848 males and 50,322 females, a proportion of 1,050 males to 1,000 females. The total deaths correspond to an annual rate of 9.9 per 1,000 of the population which is equal to that recorded during the Third Quarter of 1938.

The Mortality of Infants under one year of age was equal to 39 per 1,000 registered live births. This rate is 8 per 1,000 below the average of the 10 preceding Third Quarters and is the lowest quarterly rate ever recorded.

Small-pox.

There were no cases of small-pox notified and no deaths registered during the quarter.

Natural Increase or Decrease.

The natural *increase* of population by excess of births over deaths was 58,031 as against natural *increases* of 55,661, 58,289 and 55,537 in the corresponding quarters of 1936, 1937 and 1938.

Marriages.

The number of *persons* married in the Third Quarter of 1939 in England and Wales was 304,716, an increase of 72,084 on the number in the corresponding quarter of 1938. The number corresponds to an annual rate of 29·3 per 1,000 of the estimated mid-year population for the year 1938. This is the highest rate ever recorded, the rates next in order being 23·5 in the September quarter of 1937 and 23·2 in the June and September quarters of 1920.

21617

The explanation of the present quite exceptional increase must undoubtedly be ascribed in the main to what have been termed War Marriages, a term which covers not only marriages involving members of the armed forces but all types of marriage which have resulted from the abnormal conditions created by the War.

NOTE ON URBAN MORTALITY

During the period 1st July to 2nd September deaths from all causes in the 126 Great Towns (corrected for outward transfers of non-residents and partially for inward transfers of residents who died elsewhere) numbered 34,095 compared with 34,786 estimated for the corresponding period of 1938. The population in which these deaths (and those in separate towns shown in the left hand portion of Table V) occurred were the persons with a permanent home address in the towns between 1st July and 2nd September. Between mid-1937 and mid-1938 the estimated aggregate population of the towns increased by 1 per 1,000, but it may or may not have increased during the period from August 1938 to August 1939.

During the four weeks from 3rd to 30th September, deaths registered in the Great Towns (without correction for outward or inward transfers) numbered 16,233 compared with 17,498* estimated for the corresponding period of 1938. This comparison is disturbed by (1) evacuation of hospital patients, children and mothers from certain of the Great Towns to areas outside the aggregate, (2) voluntary movement of other persons occasioned by the outbreak of war, (3) rearrangement of hospital accommodation for the civilian sick with consequent disturbance of the normal flow into or out of the Great Towns of sick persons requiring treatment who subsequently died in hospital, and (4) exclusion from the records of the deaths of non-civilians in the 1939 period. The deaths in some of the towns, shown in the right hand portion of Table V, tended to be increased and in others decreased by the movements of civilian sick and other population mentioned above.

UNITED KINGDOM AND ÉIRE.— Third Quarter, 1939

In the United Kingdom and Eire 203,291 births and 129,043 deaths were registered in the three months ended 30th September, 1939. The increase of population owing to the excess of births over deaths was therefore, 74,248. The number of *persons* married was 350,078.

For facts, in detail, concerning Scotland, Northern Ireland and Eire, reference should be made to the Returns published by their respective Registrars-General.

^{*} The number corrected for transfers as in 1938 was 16,148.

[•] The Births and Deaths in this Table are the numbers registered, without correction for inward and outward transfers, und for London therefore differ from those in Tables V and VII. The populations at risk in some counties, especially London, were affected to an appreciable extent by evacuation movements about the end of August. Deaths of non-civilians are excluded after September 2nd.

TABLE IVa.—Marriages registered in the quarter ended 30th September, 1939.

Note.—Registration divisions, which form the areal unit of classification for marriage records, are in process of modification under the Local Government Act, 1929. Statistics are shown for entire Counties inclusive of their associated County Boroughs. The Registration County is co-extensive with the Administrative County (inclusive of associated County Boroughs), in all cases other than those marked *.

• Change in boundary ist April, 1939.

‡ The populations of Edinburgh, Glasgow and Dublin are estimated to the middle of 1939 and that of Belfast to the 31st December, 1938.

¶ The figures on the left relate to the whole of the Quarter from 1st July to 30th September and have been provisionally corrected for inward and outward transfers. In the case of Edinburgh and classow, deaths of non-civilians have been excluded after the 2nd September.

TABLE VI.—POPULATION, BIRTHS and DEATHS registered in the Quarter ended 30th September, 1939. --50,000.)

Note.—The births and deaths in this Table are not corrected for inward and outward transfers. The populations of some of the towns and the births and deaths registered in them were affected to an appreciable extent by evacuation movements (see notes on page 2).

There were no cases of Small-pox, Cholera, Plague or Typhus fever notified.

* Note:—By virtue of the Public Health Act, 1936, in all areas outside London A.C., conditions notifiable as puerperal fever prior to the 1st October, 1937, are, from that date, notifiable as, and included with, notifications of puerperal pyrexia. The London puerperal fever notifications, which in the foregoing table have been included with the puerperal pyrexia cases for convenience, are as follows:—

EXPLANATORY STATEMENT

The figures relating to Births and Deaths are tabulated from Returns furnished by the Local Registrars, and those relating to Marriages from Returns received from the Clergy, Authorised Persons, Registrars of Marriages, &c.

In this Return births and deaths in England and Wales are classified according to area of residence up to the 2nd September, 1939. After that date they are classified by place of occurrence. The deaths of non-civilian males (i.e., of serving sailors, soldiers or airmen) are included up to the above-mentioned date, but excluded thereafter.

For the purposes of the Annual Review, Births and Deaths will continue to be assigned by place of residence.

Meteorological information is suspended until further notice.

The figures relating to Notifications of Infectious Diseases are summarised from those published in the Weekly Returns, adjusted in respect of any returns or corrections received too late for insertion in that series.

Table I shows, for England and Wales, the Marriages, Births and Deaths registered in the past quarter and in each of the years and quarters of the past ten years.

Table II shows the Annual Rates corresponding to the above.

Table III is suspended.

Table IV shows the Marriages, Births and Deaths (distinguishing deaths of Infants under one year) of the quarter by Counties.

Table V shows for England and Wales and for each of the 126 County Boroughs and Great Towns and the Metropolitan Boroughs, the Births and Deaths of the Quarter (distinguishing certain causes and deaths of Infants under one year). Also for England and Wales the Birth and Death rates for the last five quarters are given.

Table VI shows, for each of the 148 Smaller Towns, the Births and Deaths of the quarter (distinguishing certain causes and deaths of Infants under one year).

Table VII shows the Births and Deaths (distinguishing certain causes) and Birth and Death rates in London and in certain cities in the British Empire and in foreign countries, in the last available quarter.

Table VIII is a summary of returns of Notified cases of Infectious Diseases. These figures are included in the present publication by arrangement with the Ministry of Health, in pursuance of Section 5 of the Census Act, 1920.

Note.—The returns for the quarters ending 30th June and 31st December contain lists of the changes of boundaries of administrative areas during the six months ending on these dates (see Table IX) while summaries of certain figures for the year are published in the December and March quarter issues (see Table X).

NOTES ON THE FOURTH QUARTER OF 1939

ENGLAND AND WALES.

Births.

The 141,108 live Births registered in this quarter comprised 72,317 males and 68,791 females, a proportion of 1,051 males to 1,000 females; the average for the 10 preceding fourth quarters being 1,051. Of the total 5,415 were illegitimate, 416 less than in the fourth quarter, 1938. The 5,681 stillbirths represent 3.9 per cent. of the total births registered.

Deaths.

The 121,431 Deaths registered comprised 62,743 males and 58,688 females, a proportion of 1,069 males to 1,000 females.

Infant Mortality was 48 per 1,000 live births, 14 below the average of the 10 preceding fourth quarters.

No cases of Smallpox were notified and no deaths were registered.

Natural Increase or Decrease.

19,677 more births were registered than deaths. The corresponding increases in the fourth quarters of 1936, 1937 and 1938 were 21,311, 15,753 and 24,557.

Marriages.

The 272,510 persons married in the quarter were 90,990 more than in the fourth quarter of 1938.

Urban Mortality.

During the December quarter deaths registered in the Great Towns (without correction for outward or inward transfers) numbered 61,919 compared with 64,413* in the corresponding quarter of 1938. This comparison is disturbed by (1) evacuation of hospital patients, children and mothers from certain of the Great Towns to areas outside the aggregate, (2) voluntary movement of other persons occasioned by the outbreak of war, (3) rearrangement of hospital accommodation for the civilian sick with consequent disturbance of the normal flow into or out of the Great Towns of sick persons requiring treatment who subsequently died in hospital, and (4) exclusion from the records of the deaths of non-civilians in the 1939 period. The deaths in some of the towns tended to be increased and in others decreased by the movements of population mentioned above. In the aggregate of Great Towns correction for the effect of changes in the resident population and in its age constitution would lower the comparable total of deaths in the December guarter of 1938 from 64,413 to about 60,800.

UNITED KINGDOM AND EIRE.

180,453 Births and 151,160 Deaths were registered in the quarter, representing an increase of 29,293. The number of persons married was 311,032. (See the Returns published by the respective Registrars-General for Scotland, Northern Ireland and Eire.)

(a) Provisional. On and after 3rd September 1939 non-civilian deaths are excluded. (c) Note:—An exceptional number of marriages are celebrated at Easter and the sequence of quarterly marriage totals is accordingly influenced by fluctuations, as between the 1st and 2nd quarter, of the position of Easter. The following shows the date of Easter Sunday in each year of record.

1929	1930	1931	1932	1933	1934	1935	1936	1937	1938	1939

SUMMARY FOR ENGLAND AND WALES, 1939

(See Table X. Other Tables will be published in the next quarterly return).

The numbers of births and deaths in Table X are compiled from returns made by local registrars. They represent a natural increase of population of 121,065, the average for the preceding five years being 119,015.

Provisional rates per 1,000 population were as follows:—Persons married 21·1; Live births 15·0; Deaths 12·1. Stillbirths were 38 per 1,000 total births and Infant Mortality 50 per 1,000 live births.

The birth rate was 0·1 below and the death rate 0·5 above that for 1938. The infant mortality is a new low record, 3 per 1,000 below that for 1938, the previous best.

The marriage rate of 21·1 was the highest recorded in this country, the previous highest being 20·2 in 1920.

TABLE VI.—BIRTHS, CIVILIAN DEATHS and DEATHS OF INFANTS under 1 year of age registered in the Quarter ended 31st December, 1939.
